

FOR THE ULTIMATE REPAIR

Kasi-4/6/8RDM

Four, six, or eight-ton capacity, truck mounted, asphalt reclaimer and storage unit.

The Kasi RSM Reclaimers are designed to maintain 4, 6, or 8 tons of hot asphalt at plant mix temperature for up to 48 hours in any weather. Additionally, it can reclaim stockpiled asphalt, returning it to 300 degree material overnight.

The unit is heated by either a diesel convection heating system or a propane infrared heating system.

Upper loading doors and rear discharge doors may be operated either mechanically or hydraulically.

The unit can be installed directly onto the rails of a truck or can be inserted into a dump body. Either way the asphalt is easily discharged by tilting the unit.

The design, workmanship and materials incorporated in all Kasi Equipment are exceptional.

BUILT TO PERFORM BUILT TO LAST BUILT TO MAKE THE ULTIMATE REPAIR

Kasi INFRARED manufactures the finest Infrared Equipment.

We combine *industry know-how* and *manufacturing expertise* to build what you need.
